

**Table 11: Expression changes in glycolysis/gluconeogenesis for the gastric bypass study.**  
Alphabetized list of reactions in glycolysis/gluconeogenesis (as defined by Recon 1). Ratio is the average log<sub>10</sub> expression ratio ( $n=3$ ) of post-/pregene expression measurements (see text for details). Negative ratios (green) indicate a decrease in expression postsurgery whereas positive ratios indicate an increase (red). Values denoted with “n/a” indicate that gene expression values were unavailable, or that expression ratios conflicted at the probe or patient levels.
