

Supporting Information

Okazaki et al. 10.1073/pnas.1302360110

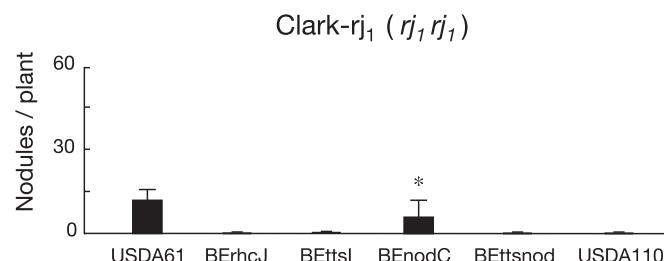

Fig. S1. Nodulation of *Glycine max* L. cv. Clark-rj₁ inoculated with wild-type and mutant strains of *Bradyrhizobium elkanii* USDA61 and *Bradyrhizobium japonicum* USDA110. Nodule numbers were counted 30 d after inoculation. Nodulation tests were performed at least three times, values shown are means obtained from at least 18 plants, and error bars indicate SDs. Statistical analyses (Student *t* test) were performed comparing mutants with the wild-type strain. **P* < 0.05.
