

ESM Fig. 1. Relationship between MNA concentrations and *NNMT* expression in adipose tissue dependent on BMI for the cross-sectional cohort. Data were \log_{10} -transformed to achieve normal distribution. *a,b*, omental adipose tissue; *c,d*, subcutaneous adipose tissue. Circles: Individuals with BMI<39 ($n=99$). Triangles: Individuals with BMI>39 ($n=99$). * $p<0.05$, *** $p<0.001$.
