

a pleomorphism

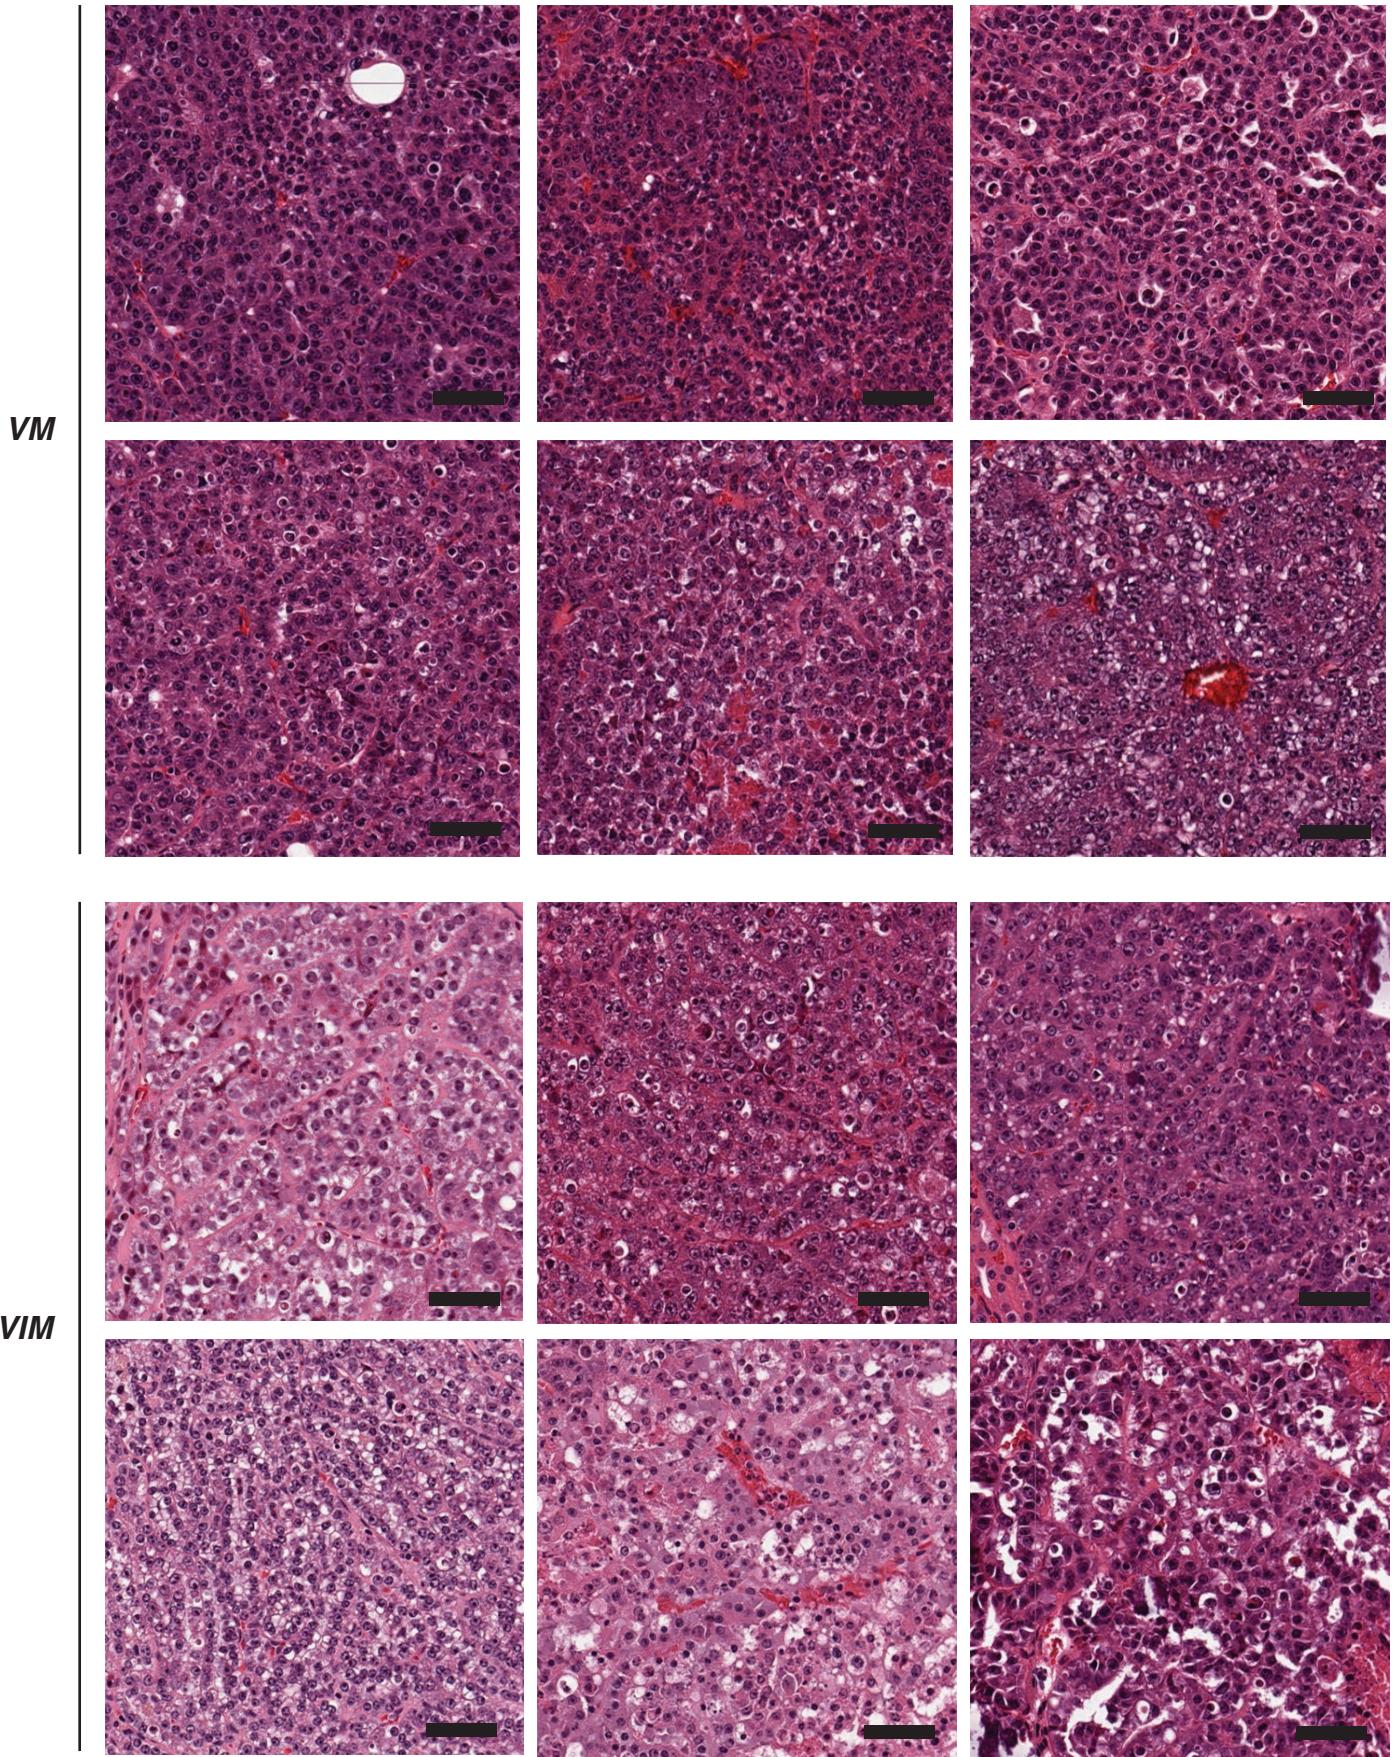

b

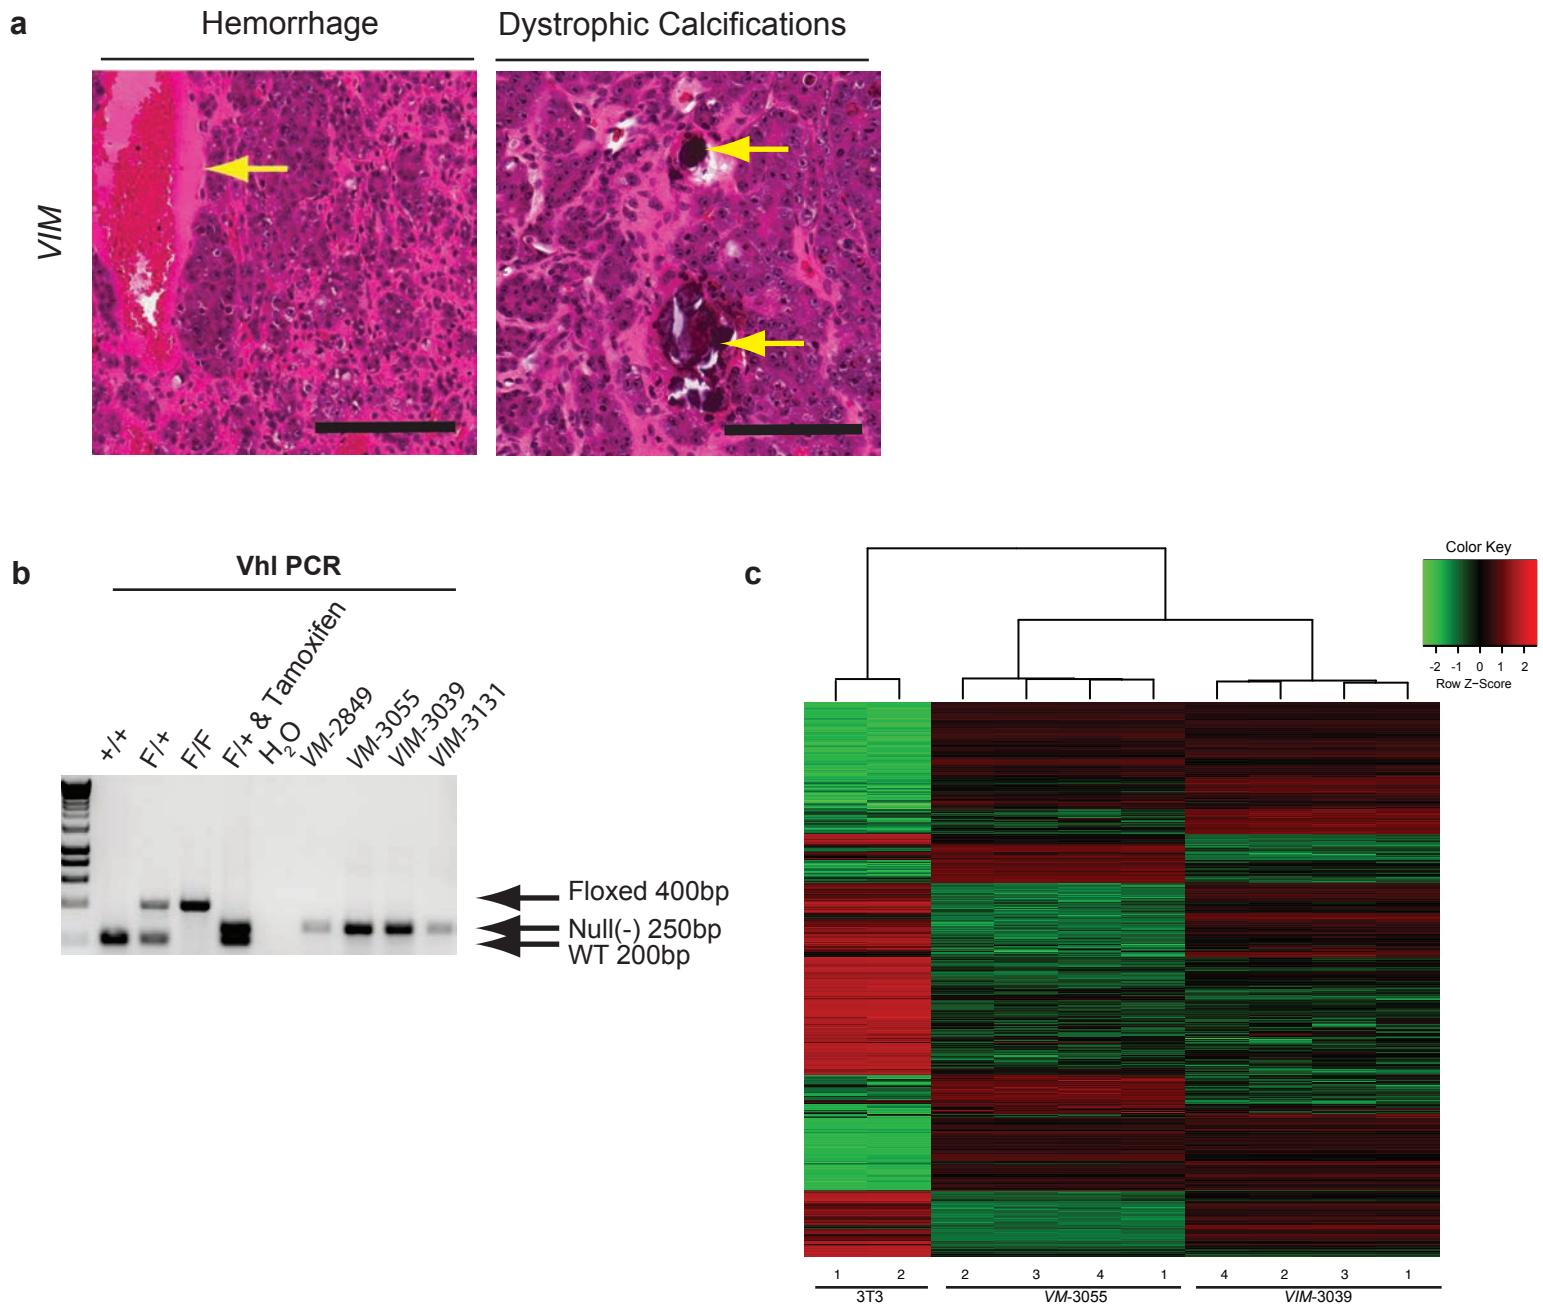

Supplementary Figure 1. MYC activation in the kidney results in histological abnormalities. (a) H&E staining of a representative kidney section from a *MYC* mouse reveals pleomorphism. (b) GSEA enrichment plots showing papillary tumors from TCGA KIRP are enriched for gene sets representing MYC activation relative to normal kidney.

Supplementary Figure 2. GISTIC copy number by gene. (a) GISTIC2 analysis on TCGA KIRC cohort of patients showing average DNA copy number measurements within region of amplification in chr8 for MYC and (b) region of deletion of chr9 for CDKN2A.

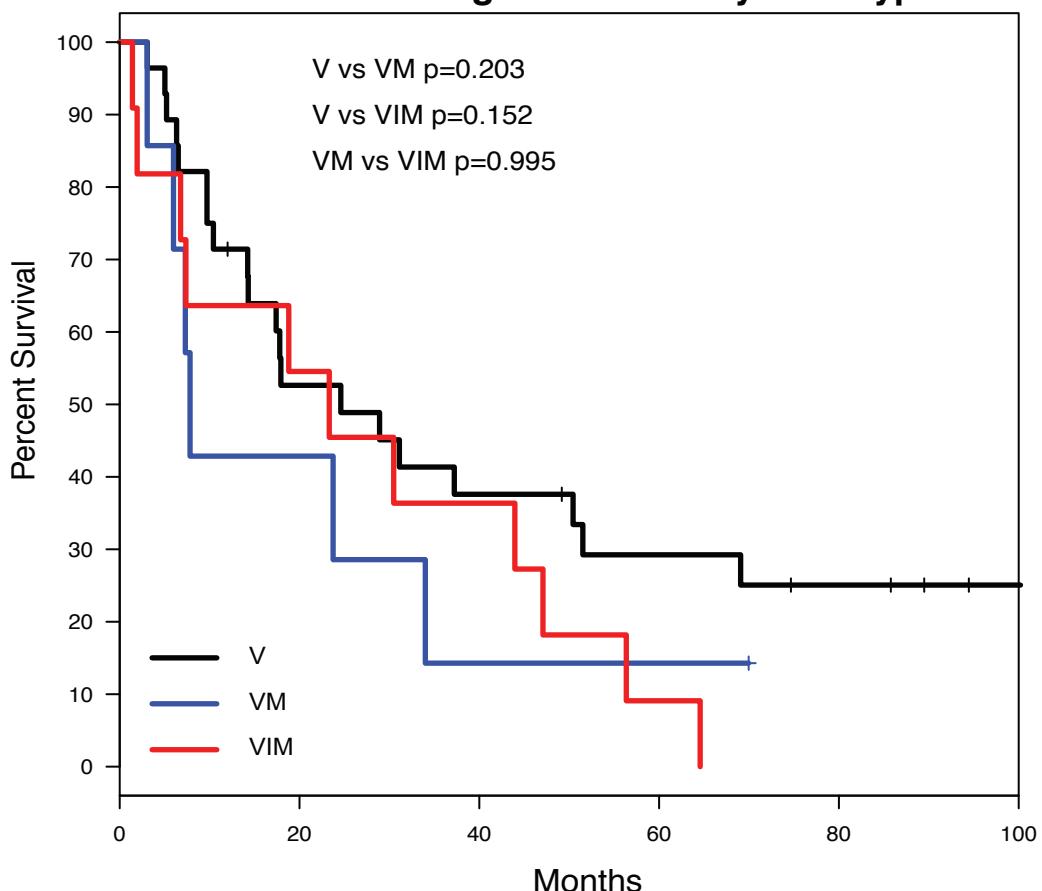

Supplementary Figure 3. Representative H&E images of VM and VIM mouse tumors. (scale bar = 50um)

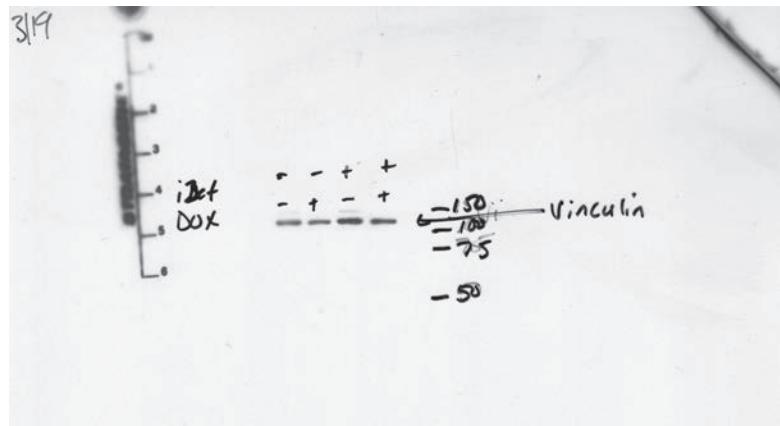

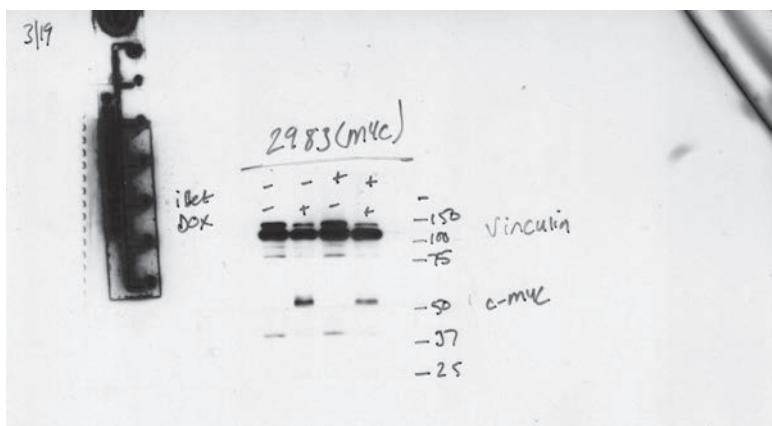

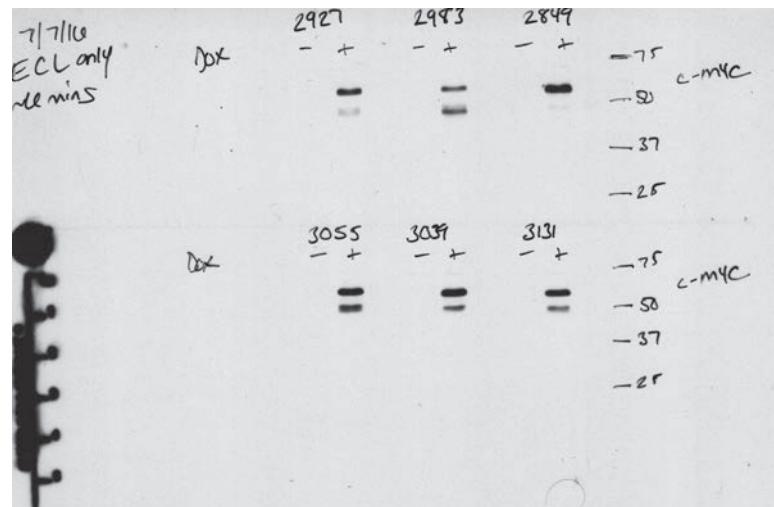

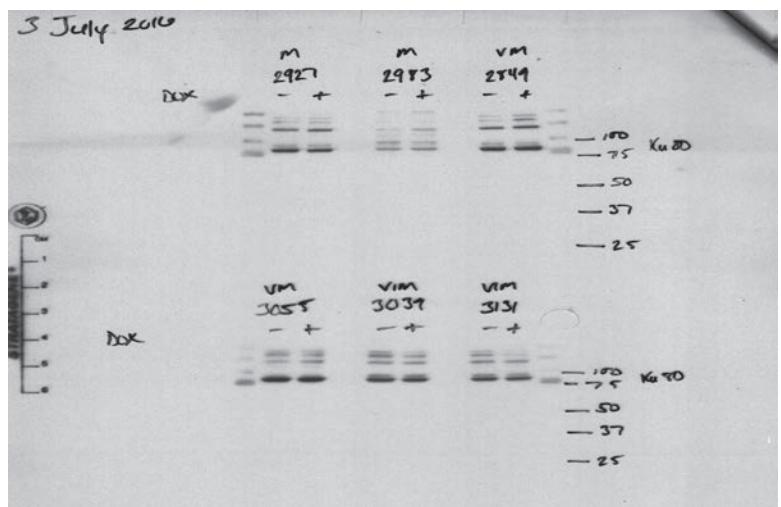

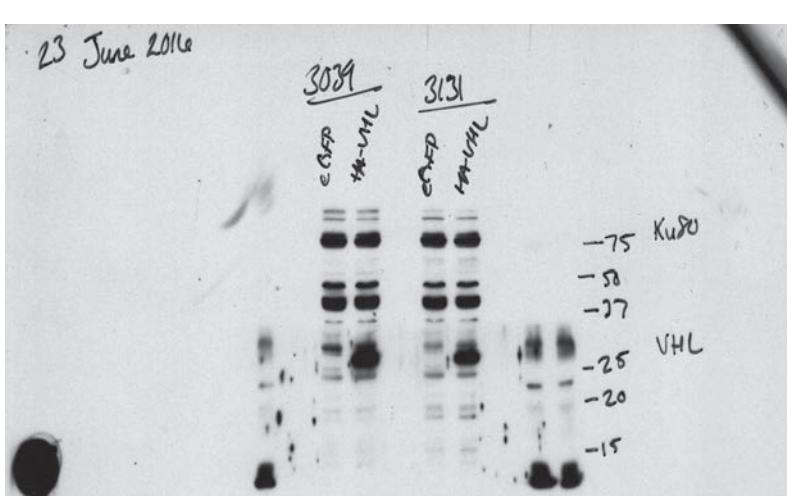

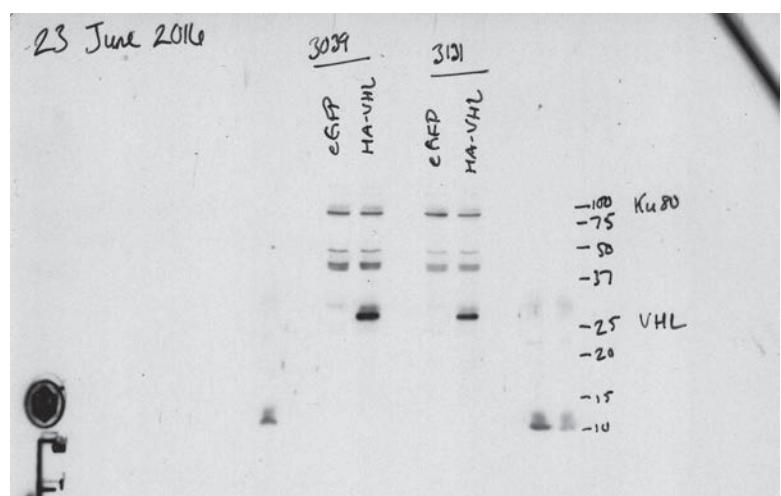

Supplementary Figure 4. VM and VIM mice have histological abnormalities in their kidneys. (a) H&E staining of a representative kidney section from a VM tumor. Arrows point to areas of hemorrhage and dystrophic calcifications. (b) PCR verification of Vhl deletion in the VM and VIM cell lines. (c) Heat map showing distinct expression patterns between 3T3 fibroblasts and VM-3055 and VIM-3039 cell lines.

TCGA KIRC Stage 4 Survival by Genotype

Supplementary Figure 5. No difference in survival among stage IV patients. Kaplan-Meier survival curve of TCGA KIRC stage IV KIRC patients with V, VM, or VIM genotype. V (n=28), VM (n=7), VIM (n=11). Log rank V vs VM p=0.203, V vs VIM p=0.152, VM vs VIM p=0.995.

A**B****C**

Supplementary Figure 6. Un-cropped scans of western blot membranes. (a) MYC-2983 blot (Figure 1E). (b) MYC-2927 blot (Figure 1E, VM and VIM cell lines (Figure 3A). (c) VIM-3039 and VIM-3131 pBabe eGFP and pBabe HA-VHL (Figure 6A).

Supplemental Table 1. Summary of RCC GEM models

Abbreviation	Genotype	Functional Effect
MYC	<i>Ksp-rtTA; Tet-O-MYC</i>	<ul style="list-style-type: none">• Dox inducible <i>MYC</i> expression
V	<i>KspCreERT2; Vhl^{F/F}</i>	<ul style="list-style-type: none">• conditional inactivation of <i>Vhl</i>
VM	<i>KspCreERT2; Vhl^{F/F}; Ksp-rtTA; Tet-O-Myc</i>	<ul style="list-style-type: none">• conditional inactivation of <i>Vhl</i>• Dox inducible <i>MYC</i> expression
VIM	<i>KspCreERT2; Vhl^{F/F}; Ink/Arf^{-/-}; Ksp-rtTA; Tet-O-Myc</i>	<ul style="list-style-type: none">• conditional inactivation of <i>Vhl</i>• germline <i>Ink/Arf^{-/-}</i>• Dox inducible <i>MYC</i> expression
