Supplementary Online Content

Wildes T, Mickle AM, Ben Abdallah A. Effect of electroencephalography-guided anesthetic administration on postoperative delirium among older adults undergoing major surgery [published February 2, 2019]. *JAMA*. doi:10.1001/jama.2018.22005

This supplementary material has been provided by the authors to give readers additional information about their work.

List of investigators and committees in the ENGAGES Trial

***Steering Committee**:* Michael S Avidan, MBBCh, Troy S Wildes, MD, Eric J Lenze, MD, Susan Stark, PhD, Daniel A Emmert, MD, Tracey W Stevens, MD, Thomas J Graetz, MD, Sharon K Inouye, MD, MPH, Eva M Schmitt, PhD, Brian A Torres, DNP, Spencer Melby, MD, Ben J Palanca, MD, PhD

Trial Management Committee: Michael S Avidan, MBBCh, Sherry L McKinnon, BS, Angela M Mickle, MS, Jordan Oberhaus, BS, Thaddeus P Budelier, MD, Daniel Park, BS

***Data Management Committee**:* Arbi Ben Abdallah, PhD, Nan Lin, PhD, Alex Kronzer, BA

Data Safety Monitoring Board: Frederick Sieber, MD (Chair), Heather Gwynn Allore, PhD, Donna Marie Fick, PhD, Charles W Hogue Jr, MD, Pratik Pandharipande, MD, Molly Wagster, PhD

Safety Officer: Charles Brown, MD

eTable1: Patient Sociodemographic Characteristics

	Overall	Guided Group	Usual Care Group
	N=1232 No. (%)	**N=614** No. (%)	**N=618** No. (%)
Employment status			
Employed	318 (25.8)	167 (27.2)	151 (24.4)

History of post-operative delirium	115 (9.4)	56 (9.2)	59 (9.6)
Sensory impairment			
Hearing impairment	260 (21.1)	137 (22.3)	123 (19.9)
Hearing limits daily activities	158 (12.8)	79 (12.9)	79 (12.8)
Vision impairment	1127 (91.5)	557 (90.7)	570 (92.2)
Vision limits daily activities	145 (11.8)	72 (11.7)	73 (11.8)

eTable3: Patient Sociodemographic Characteristics and Pre-Operative Health Conditions by 30-day follow-up Response

	Overall N=1,209*	Respondents N=1036	Non-Respondents N=173
Age - median [IQR] years	69.3 [64.8 to 75.0]	69.3 [64.7 to 74.9]	69.2 [65.2 to 75.9]
Female sex – no. (%)	555 (45.9)	464 (44.8)	91 (52.6)
Body mass index – median [IQR] kg/m^2	29.0 [25.0 to 33.0]	28.0 [25.0 to 33.0]	29.0 [25.0 to 34.0]
Race[a] – no. (%)			
White	1090 (90.2)	948 (91.5)	142 (82.1)
African-American	107 (8.9)	79 (7.6)	28 (16.2)
Other	12 (1.0)	9 (1.0)	3 (1.7)
Education: attended college – no. (%)	399 (33.0)	356 (34.4)	43 (24.9)
Employed – no. (%)	317 (26.2)	276 (28.8)	41 (28.7)
Median-income less than $50,000 – no. (%)	695 (57.5)	577 (55.7)	118 68.2)
Public health insurance – no. (%)	814 (67.3)	693 (66.9)	121 (69.9)
Missouri resident – no. (%)	653 (54.0)	549 (53.0)	104 (60.1)
Lives alone – no. (%)	285 (23.6)	234 (22.6)	51 (29.5)
Lifetime tobacco use[b] – no. (%)	711 (58.8)	598 (57.7)	113 (65.3)
Current weekly alcohol use[c] – no. (%)	576 (47.6)	507 (48.9)	69 (39.9)
Current use of anticonvulsants – no. (%)	171 (14.1)	130 (12.5)	41 (23.7)
Regular use of opioids – no. (%)	298 (24.6)	238 (23.0)	60 (34.7)
Regular use of benzodiazepine – no. (%)	187 (15.5)	157 (15.2)	30 (17.3)
ASA physical classification[d] >3 – no. (%)	416 (34.4)	344 (33.2)	72 (41.6)
Marginal exercise tolerance (< 4 METs) – no. (%)	578 (47.8)	473 (47.5)	105 (65.2)
Pulmonary hypertension – no. (%)	187 (15.5)	161 (15.5)	26 (15.0)
Aortic stenosis – no. (%)	194 (16.0)	168 (16.2)	26 (15.0)

eTable3: Patient Sociodemographic Characteristics and Pre-Operative Health Conditions by 30-day follow-up Response (cont.)

	Overall N=1,209	Respondents N=1036	Non-Respondents N=173
History of delirium – no. (%)	151 (12.5)	128 (12.4)	23 (13.3)
Number of co-morbidities - median [IQR]	5.0 [3.0 to 6.0]	4.0 [3.0 to 6.0]	5.0 [3.0 to 7.0]
History of depression – no. (%)	163 (13.5)	125 (12.1)	38 (22.0)
PHQ8[e] – median [IQR]	3.0 [0.0 to 6.0]	3.0 [0.0 to 6.0]	4.0 [1.0 to 8.0]
Short Blessed Test for Cognition[f] – median [IQR]	2.0 [0.0 to 4.0]	2.0 [0.0 to 4.0]	2.0 [0.0 to 6.0]
8-item Interview to Differentiate Aging and Dementia[g] – median [IQR]	0.0 [0.0 to 1.0]	0.0 [0.0 to 1.0]	0.0 [0.0 to 1.0]
Barthel Activities of Daily Living Index[h] – median [IQR]	15.0 [15.0 to 15.0]	15.0 [15.0 to 15.0]	15.0 [14.0 to 15.0]
Grip strength in kg – mean (SD)	26.1 (10.9)	26.4 (10.7)	24.0 (11.7)
Timed Up and Go test – median [IQR] seconds	10.8 [9.3 to 13.2]	10.7 [9.2 to 13.0]	11.4 [10.0 to 14.9]
Lawton Instrumental Activities of Daily Living[i] – median [IQR]	8.0 [7.0 to 8.0]	8.0 [8.0 to 8.0]	8.0 [7.0 to 8.0]
VR-12 Physical Component Score[j] – mean (SD)	38.2 (11.8)	38.6 (11.8)	35.6 (11.6)
VR-12 Mental Component Score[j] – mean (SD)	53.6 (10.8)	54.1 (10.5)	50.1 (12.1)

IQR, interquartile range**.**

[a]Patient self reported.

[b]Lifetime tobacco use, which includes current use, was obtained from patients' electronic medical record. During their assessment prior to surgery, patients are asked whether they have ever smoked tobacco.

[c]Alcohol consumption was obtained from patients' electronic medical record. All surgical patients are asked about their average number of drinks per week if they respond that they consume alcoholic drinks.

[d]ASA: American Society of Anesthesiologists physical status classification system, (1 to 6), 1. Healthy patient, 2. Mild systemic disease, 3. Severe systemic disease, 4. Severe systemic disease that is a constant threat to life, 5. Not expected to survive without procedure, 6. Neurologically deceased organ donor. In this study, ASA was dichotomized with a threshold set at 3 or higher

[e]PHQ8: eight-item Personal Health Questionnaire Depression Scale (0 to 24): 10 or more indicates major depression, 20 or more indicates severe major depression

[f]Short Blessed Test for Cognition (0 to 28): 0-4 normal cognition, 5-9 questionable impairment, 10 or more impairment consistent with dementia.

[g]8-item Interview to Differentiate Aging and Dementia (0 to 8): 0-1 Normal cognition, 2 or greater cognitive impairment is likely to be present.

[h]Barthel Activities of Daily Living Index (0 to 100): <20 totally dependent, 20-39 very dependent, 40-59 partially dependent, 60-79 minimally dependent, 80-100 independent

[i]Lawton Instrumental Activities of Daily Living: scale ranges from 0 (low function, dependent) to 8 (high function, independent)

[j]VR-12, Veterans' Rand 12-item Health Survey: standardized 0-100 scale, where 50 represents population average

*Note: There were 23 patients who died within 30-days post-discharge, 1,232 – 23 = 1,209. The 30 day follow up response rate was 1036/1209 (85.7%)

Statistical differences were found in the following variables:

Sociodemographic: Race (minority) self-reported by patient, Education (did not attend college), and patients with an average median-income less than $50,000

Health related conditions: Current antoconvulsants & opioid use, ASA status, Marginal exercise tolerance (<4 METS), PHQ8 (depression screen) score, and VR-12 physical component score

eTable4: Laboratory Values

	Preoperative Laboratory Values[a]			Postoperative Laboratory Values[b]			
	Overall	**Guided Group**	**Usual Care Group**	**Overall**	**Guided Group**	**Usual Care Group**	
	Median [IQR]	Median [IQR]	Median [IQR]	Median [IQR]	Median [IQR]	Median [IQR]	
Sodium	140.0 [138.0 to 142.0]	140 [138.0 to 142.0]	140 [138.0 to 142.0]	140.0 [138.0 to 142.0]	140 [138.0 to 142.0]	140 [138.0 to 142.0]

Creatinine	1.0 [0.8 to 1.2]	0.99 [0.79 to 1.21	0.97 [0.80 to 1.18]	0.9 [0.8 to 1.2]	0.94 [0.76 to 1.17]	0.94 [0.76 to 1.20]	
Glucose	102.0 [91.0 to 125.0]	102.0 [91.0 to 125.0]	102.0 [90.0 to 126.0]	156.0 [132.0 to 185.0]	155.0 [133.0 to 182.0]	156.0 [131.0 to 188.0]	
Albumin	4.2 [3.9 to 4.4]	4.2 [3.9 to 4.4]	4.1 [3.9 to 4.4]	3.5 [3.2 to 3.8]	3.5 [3.2 to 3.8]	3.5 [3.2 to 3.8]	
Hematocrit	38.7 [34.6 to 42.0]	38.5 [34.3 to 41.9]	38.8 [35.1 to 42.3]	32.7[29.2 to 36.1]	32.9 [29.2 to 36.2]	32.4 [29.4 to 35.9]	
Hemoglobin	12.7 [11.2 to 13.9]	12.6 [11.1 to 13.8]	12.7 [11.4 to 13.9]	10.7[9.6 to 12.7]	10.8 [9.6 to 11.6]	10.7 [9.6 to 11.9]	

IQR, interquartile range. BUN, blood urea nitrogen.

[a]Preoperative laboratory values were those documented closest prior to surgery but no more than 30 days prior.

[b]Postoperative lab values were the first values documented following the procedure.

The units for sodium and potassium are mmol/L. BUN, creatinine, glucose and albumin are reported as mg/dL. Hematocrit is a percent, and hemoglobin and albumin are in g/dL.

eTable5: Surgery Information

	Overall	Guided Group	Usual Care Group
	N=1232 No. (%)	**N=614** No. (%)	**N=618** No. (%)
Preoperative admission status			
Inpatient	318 (25.8)	156 (25.4)	162 (26.2)
Outpatient	912 (74.0)	457 (74.4)	455 (73.6)
Type of anaesthesia			
General without regional	1189 (96.5)	594 (96.7)	595 (96.3)
General plus regional	43 (3.5)	20 (3.3)	23 (3.7)
Surgery type[a]			
Cardiac	475 (38.6)	237 (38.6)	238 (38.5)
Gastrointestinal	148 (12.0)	74 (12.1)	74 (12.0)

HR <50	0.0 [0.0 to 11.0]	0.0 [0.0 to 10.0]	0.93	0.0	-0.6 to 0.6
HR >100	1.0 [0.0 to 11.0]	1.0 [0.0 to 9.0]	0.97	0.0	-0.9 to 0.9

IQR, interquartile range; BP, blood pressure; HR, heart rate; MAP, mean arterial pressure.

eTable8: Number of Delirium Assessments Completed		
	CAM/CAM-ICU Completed	**Chart Review Completed**
	No./total no. (%)[a]	**No./total No. (%)[a]**
Postoperative day 1	1057/1194 (88.5)	1194/1194 (100.0)
Postoperative day 2	1013/1157 (87.6)	1157/1157 (100.0)
Postoperative day 3	861/1061 (81.1)	1061/1061 (100.0)
Postoperative day 4	717/895 (80.1)	895/895 (100.0)
Postoperative day 5	580/756 (76.7)	756/756 (100.0)

CAM, Confusion Assessment Method; CAM-ICU, Confusion Assessment Method for the intensive care unit.
[a]Denominators are the number of patients eligible for an assessment on each postoperative day. Patients were eligible if they were alive, in the hospital and had RASS score >-4.
At least one CAM or CAM-ICU assessment was performed in 1188 patients while chart review was completed on all eligible patients. A total of 1213 of the 1232 randomized patients had the delirium outcome assessed during postoperative days 1-5 using one of these modalities. Of the 19 remaining patients, one patient died during surgery, 3 patients withdrew from the study the day of surgery, 11 patients were heavily sedated over the entire assessment period, and 4 patients were discharged prior to the afternoon of postoperative day 1.

eTable9: Reasons CAM or CAM-ICU Assessments Were Not Conducted

Reasons for Ineligibility	Postoperative Day 1	Postoperative Day 2	Postoperative Day 3	Postoperative Day 4	Postoperative Day 5
Discharged[a]	13	73	211	363	521
Died[a]	1	2	3	4	6
Reasons not assessed					
Refused	81	72	83	83	70
Undergoing medical procedure	11	7	12	6	7
Sedation or coma (RASS < -3)	43	33	30	24	23
Other[b]	26	32	32	35	25
Total not completed – no./total no. (%)[c]	161/1194 (13.5)	144/1157 (12.4)	157/1061 (14.8)	148/895 (16.5)	125/756 (16.5)

CAM, Confusion Assessment Method; CAM-ICU, Confusion Assessment Method for the intensive care unit; RASS, Richmond Agitation and Sedation Scale.
[a]Cumulative values.
[b]Other may include family or nursing request, or patient withdrew.
[c]Denominators are the number of patients eligible for an assessment on each postoperative day. Patients were eligible if they were alive, in the hospital and had RASS score >-4.

eTable10: Logistic Regression and Covariate Adjustment for Delirium

The purpose of the logistic regression and adjustment for prognostic covariates was to improve the power of the trial to detect a beneficial effect attributable to the intervention (minimization of electroencephalographic suppression) or to usual anesthesia care on the outcome of interest, postoperative delirium. The covariates included were pre-selected and considered likely to be associated with postoperative delirium.

Logistic Regression

	Coefficient	*P-V*alue	Odds Ratio	95% CI
Guided group	0.192	0.21	1.21	0.90 to 1.64
Age	0.039	<0.001	1.04	1.02 to 1.06

n=1,051	0.6951	0.0188	0.66 to 0.73
Pearsons chi2 = 1043.46		Hosmer-Lemeshow chi2 = 7.79	
Prob > chi2 = 0.3783		Prob > chi2 = 0.4542	

CI, Confidence Interval; PHQ8, eight-item Patient Health Questionnaire depression scale; ROC, receiver operating characteristic.

[a]ASA: American Society of Anesthesiologists physical status classification system, 1-6, 1. Healthy patient, 2. Mild systemic disease, 3. Severe systemic disease, 4. Severe systemic disease that is a constant threat to life, 5. Not expected to survive without procedure, 6. Neurologically deceased organ donor. In this study, ASA was dichotomized with a threshold set at 3 or higher.

The logistic regression adjusted odds ratio for delirium was 1.21 (95% CI, 0.90 to 1.64; *P*=0.21) in the guided group with reference to the usual care group.

[b]No imputation was performed. The amount of missing data for any individual characteristic included in this model was less than 10%. The overall percentage of patients excluded from this analysis was 13.4% (N=162/1213).

Standardized Adjustment Method with Bootstrapped Standard Error

Parameters	dy/dx	Delta-Method Standard Error	Z	P> |z|	95% CI
Logit (n=1051)	0.032	0.0253	1.25	0.210	-0.018 to 0.081

Parameters	Observed Coefficient	Bootstrap Standard Error	Z	P> |z|	95% CI
Bootstrap (n=1000)	0.032	0.0258	1.23	0.218	-0.019 to 0.082

CI, confidence interval.

Using the standardized estimator method with bootstrapping, the standardized marginal effect was 0.032 (P=0.22; 95% CI, -0.019 to 0.082).

eTable11: Sensitivity Analyses – Treating Patients with Missing Assessments as All Positive or All Negative

	Guided Group	Usual Care Group	Difference[a] (95%CI)	*P*-Value[b]
Analysis with no imputation of missing delirium assessments (for the purpose of reference)				
- Delirium incidence – no./total (%)	157/604 (26.0)	140/609 (23.0)	3.0% (-2.0 to 8.0)	0.22
Analyses with imputed missing delirium assessments				
- All missing imputed as +ve – no./total (%)	167/614 (27.2)	148/617 (24.0)	3.2% (-2.0 to 8.2)	0.22
- All missing imputed as -ve – no./total (%)	157/614 (25.6)	140/617 (22.7)	2.9% (-2.0 to 7.8)	0.26

CI, confidence interval.
[a]Absolute difference between groups. All 95%CIs for difference between medians were computed using Hodges-Lehmann estimator with asymptotic standard error.
[b]P values were calculated with the use of the chi-square test with Fisher's exact test.
[c]Note: One patient died on the day of surgery.

eTable12: Sensitivity Analysis – Actual Treatment Received (Per Protocol Analysis) and Per Protocol Analyses with Imputation of Missing Delirium Assessments

	Guided Group	Usual Care Group	Difference[a] (95%CI)	*P*-Value[b]
Per protocol analysis with no imputation of missing delirium assessments				
Delirium incidence – no./total no. (%)	161/608 (26.5)	136/605 (22.5)	4.0% (-1.0 to 8.8)	0.11
Per protocol analyses with imputed missing delirium assessments				
- All missing imputed as +ve – no./total (%)[c]	172/619 (27.8)	143/612 (23.4)	4.4% (-0.6 to 9.4)	0.08
- All missing imputed as -ve – no./total (%)[c]	161/619 (26.1)	136/612 (22.2)	3.9% (-1.1 to 8.7)	0.13

CI, confidence interval.
[a]Absolute difference between groups. All 95%CIs for difference between medians were computed using Hodges-Lehmann estimator with asymptotic standard error.
[b]P values were calculated with the use of the chi-square test with Fisher's exact test.
[c]Note: One patient died on the day of surgery

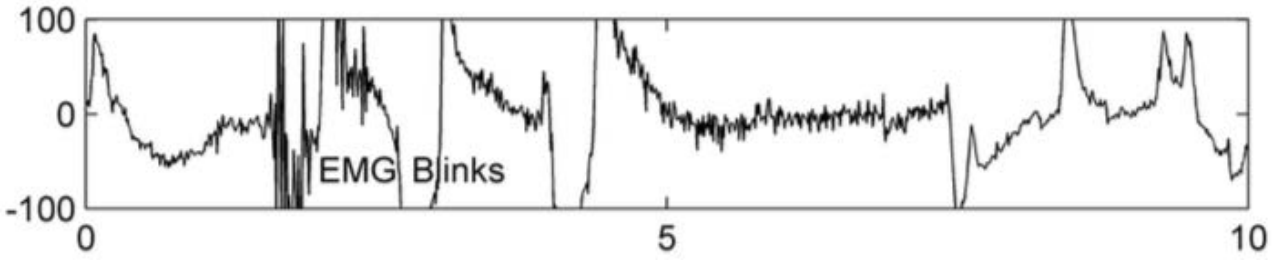
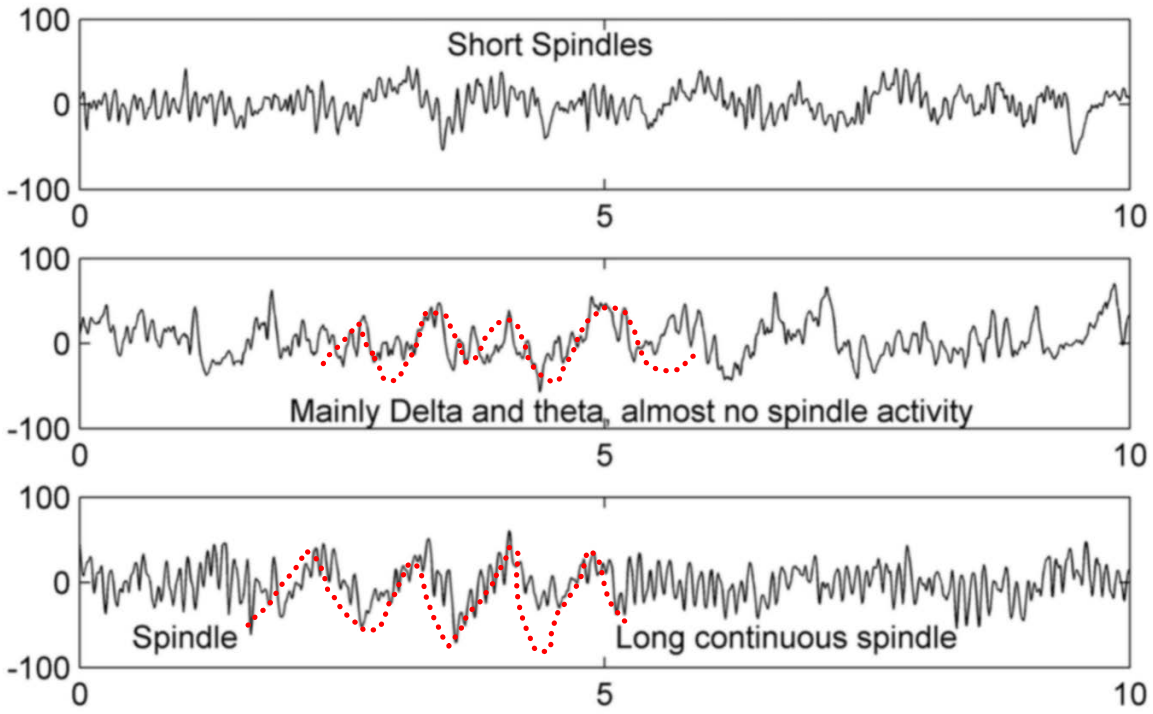
eFigure1: ENGAGES Study Electroencephalography (EEG) Guided Protocol Quick Reference Guide

This guide was provided to anesthesia clinicians caring for patients in the Guided arm on the day of surgery to assist with EEG guidance of anesthesia.

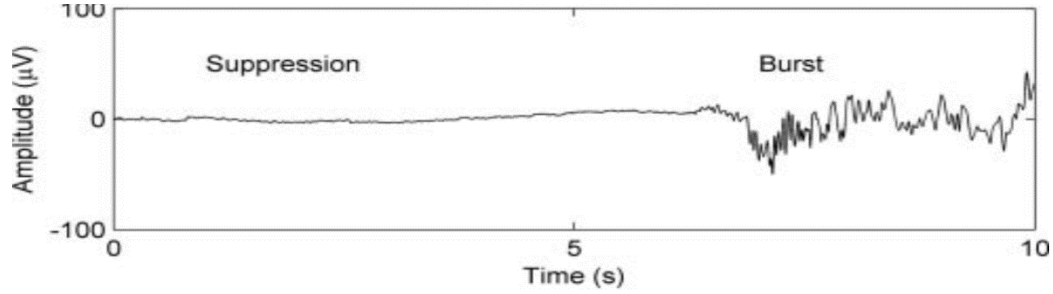
1) **EEG-guided protocol monitor setup**
    a. **Set the EEG wave to display at both 50 mm/second and 6.25 mm/second sweep speeds.** The faster 50 mm/s sweep is good for appreciating higher frequency waves while the 6.25 mm/s sweep is good for appreciating delta waves.
    b. **Set the EEG amplitude scale to 50 µV**. Adjust as needed for optimal display on each patient.
    c. **Turn EEG filter off** to prevent low frequency filtering (i.e., delta wave filtering).
    d. **EEG alarms:** BIS alarm range is set to low/high limits of 40/60 by default. Adjust according to clinical discretion.
    e. **Numeric values:** The BIS (bispectral index), SQI (signal quality index), SR (suppression ratio), EMG (electromyographic strength), and SEF (spectral edge frequency 95%) should be displayed on the monitor.
2) **Important EEG frequency ranges include gamma (>30 Hz), high beta (20-30 Hz), low beta (12-20 Hz), alpha (8-12 Hz), theta (4-8 Hz), and delta (0.5-4 Hz).**
3) **The EEG of the awake patient:** The awake EEG is dominated by high-frequency (i.e., high beta and gamma) activity, usually of low amplitude, producing a fuzzy-appearing wave on the faster 50 mm/s tracing. High-frequency, high-amplitude activity (EMG) may be seen. Additionally, periodic high-amplitude deviations (from blinking) may be observed.



4) **The EEG during general anesthesia:** The key EEG features that indicate appropriate anesthetic depth are the presence of delta (0.5-4 Hz) waves, absence of high beta (20-30 Hz) waves, and absence of any periods of burst suppression. Waves in the alpha (8-12 Hz), theta (4-8 Hz) or low beta (12-20 Hz) frequency ranges, often termed spindles, may or may not be superimposed. In the absence of contrary information or an artifactual EEG wave, BIS values below 40 also suggest that anesthesia is too deep. If delta activity is absent and other data support that anesthetic depth may be inadequate, increasing anesthetic administration might be indicated.
    In the following figures, the dotted red trace demonstrates waves in the delta range (~1 Hz).



5) **EEG suppression**: Any flattened interval on the EEG tracing (EEG suppression) indicates excessive anesthetic depth or suggests the presence of other suppressive stimuli (e.g., cerebral ischemia). Any amount of EEG suppression should be avoided as a part of the ENGAGES EEG-guided protocol, unless clinically required. EEG suppression is frequently observed after boluses of induction agents, including small doses given intraoperatively (e.g., propofol 20-50mg). For example, anesthetic boluses are sometimes administered to hypertensive patients whose EEG and anesthetic concentrations indicate adequate anesthesia, thus triggering EEG suppression. EEG suppression is also variably observed with anesthetic induction. The duration of such suppression should be minimized if possible.



6) Age-adjusted concentrations for volatile agents to achieve 0.5 MAC / 0.75 MAC / 1.0 MAC:

	Desflurane (% atm)			**Isoflurane (% atm)**			**Sevoflurane (% atm)**		
Age	0.5 MAC	0.75 MAC	1.0 MAC	0.5 MAC	0.75 MAC	1.0 MAC	0.5 MAC	0.75 MAC	1.0 MAC
65	2.8%	4.2%	5.7%	0.5%	0.8%	1.0%	0.8%	1.2%	1.5%
75	2.7%	4.0%	5.3%	0.5%	0.7%	0.9%	0.7%	1.1%	1.4%
85	2.5%	3.7%	5.0%	0.4%	0.7%	0.9%	0.7%	1.0%	1.4%
95	2.3%	3.5%	4.7%	0.4%	0.6%	0.8%	0.6%	1.0%	1.3%

eFigure3: Anesthesia Fidelity Checklist

Fidelity checklists were provided to all anesthesia clinicians during the surgery to complete and sign. A checklist was completed for 1227 of the 1232 patients in the ENGAGES trial.

Patient enrollment ID:_____

ENGAGES
Anesthesia Fidelity Checklist – Guided Group

Yes

No

	Yes	No
1. Was a quality EEG waveform visible for the duration of the case (excluding discrete periods of artifact or probe adjustment)?		
2. Was the EEG filter turned OFF for the duration of the surgery?		
3. Were you trained to interpret EEG by the ENGAGES team?		
4. Did you use the EEG-guided anesthetic protocol to guide your anesthetic (only deviating from it when you thought it was clinically necessary)?		

Did the patient have any undesired intraoperative movement or breathing during the surgery?

☐ No

Frequency

☐ Yes (check all that apply)

- ☐ Mild: Undesired spontaneous breathing or non-purposeful movement with no impact on the surgery or patient outcome. _____ times
- ☐ Moderate: Movement that mildly impacted the surgery (e.g., required a pause in the surgery for coughing or straining) and required deepening of anesthesia, deepening of analgesia, or increased muscle relaxant _____ times
- ☐ Severe: Movement with a marked negative impact on the surgery (e.g., a patient injury, loss of sterility of the surgical field, purposeful movements suggestive of awareness, or other surgical complication) _____ times
