Supplementary information

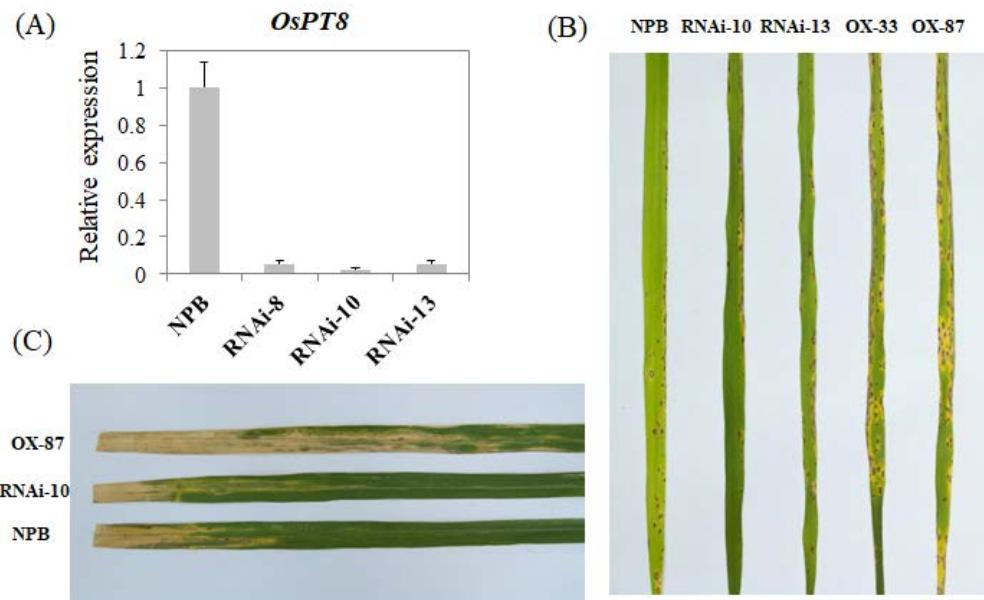

Figure S1. Disease resistance phenotypes of the *OsPT8* OX and RNAi plants. (A) *OsPT8* relative transcription levels in *OsPT8*-RNAi plants. Error bars indicate the SD from three biological replicates ($n = 3$); (B) Disease resistance phenotypes of the *OsPT8*-OX, *OsPT8*-RNAi and wild-type (NPB) plants after spray inoculation with *M. oryzae* isolate 110-2 (Photographed at 7 dpi); (C) Disease resistance phenotypes of the *OsPT8*-OX, *OsPT8*-RNAi and NPB plants after inoculation with *Xoo* strain PXO99 (Photographed at 14 dpi).

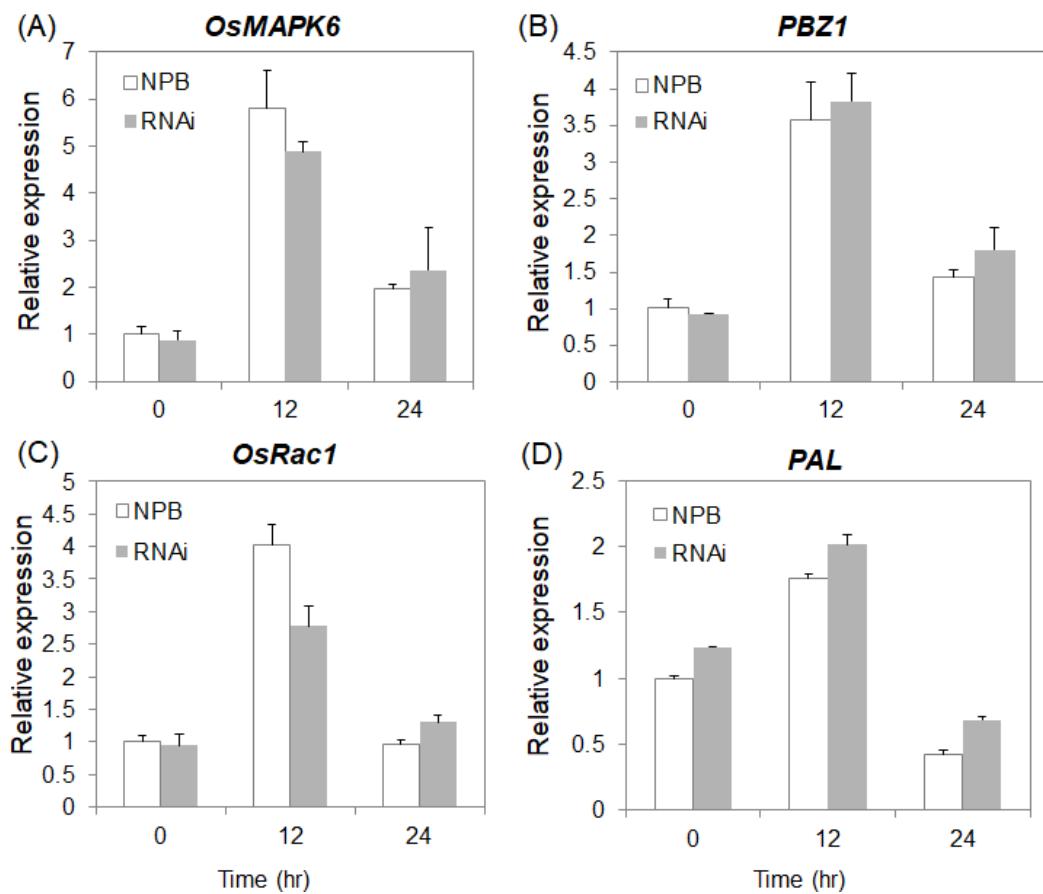

Figure S2. Defense-related genes transcription in the *OsPT8*-RNAi and wild type (NPB) plants after the rice blast pathogen *M. oryzae* or the bacterial blight pathogen *Xoo* inoculation. (A), (B) Time-course relative transcription levels of *MAPK6* and *PBZ1* in *OsPT8*-RNAi and NPB plants after *M. oryzae* isolate 110-2 inoculated; (C), (D) Time-course relative transcription levels of *OsRac1* and *PAL* in *OsPT8*-RNAi and NPB plants after *Xoo* strain PXO99 inoculation. Error bars indicate the SD from three biological replicates ($n = 3$).

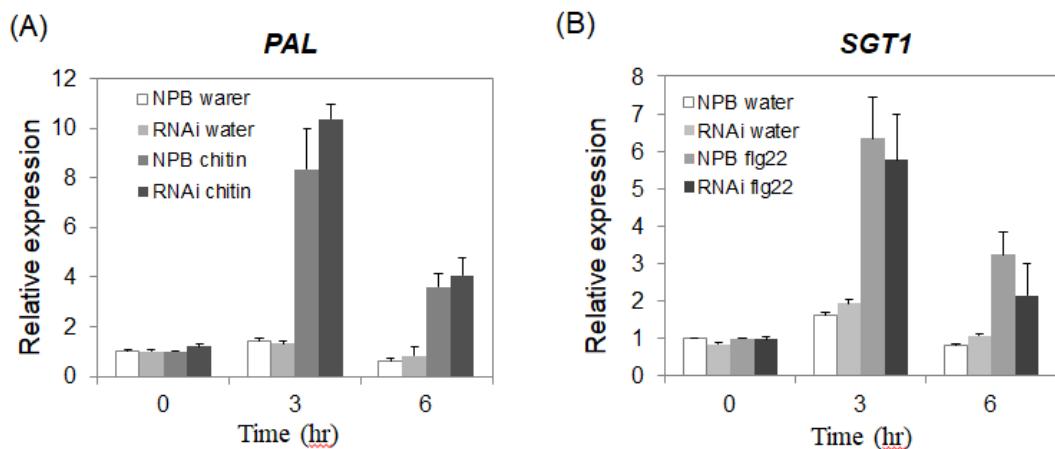

Figure S3. Defense-related gene expression of the *OsPT8*-RNAi and NPB plants after chitin or flg22 treatments. (A) Time-course relative transcript levels of *PAL* in *OsPT8*-RNAi and wild type (NPB) plants after chitin treatment; (B) Time-course relative transcript levels of *SGT1* in *OsPT8*-RNAi and NPB plants after flg22 treatment. Error bars indicate the SD from three biological replicates ($n = 3$).

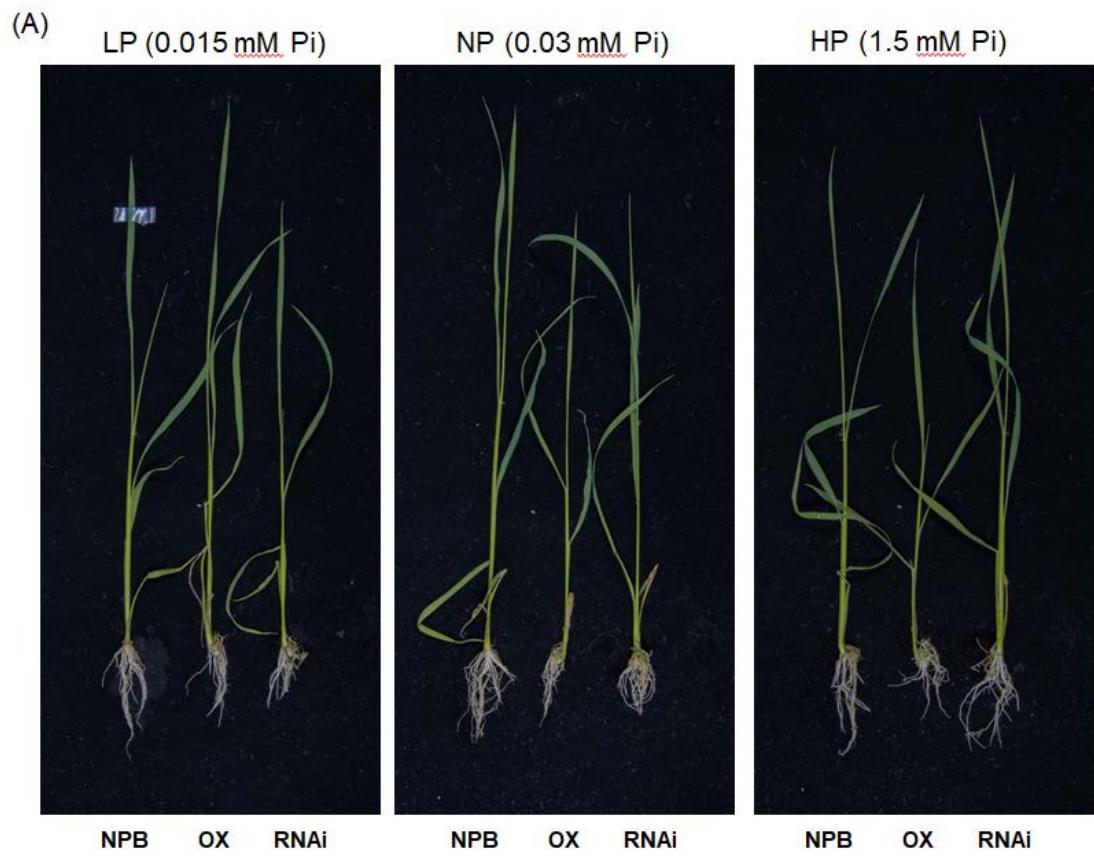

Figure S4. Growth phenotypes of the *OsPT8*-OX, *OsPT8*-RNAi and NPB plants under different phosphate concentrations.
