eMethods. Handling Incident SARS-CoV-2 Infections

In the primary analysis, we censored individuals if and when they developed a documented SARS-CoV-2 infection and estimated a controlled direct effect of the vaccines on potential adverse events not mediated by infection. That is, these risks reflect potential complications arising only from the vaccines themselves. This estimand refers to a hypothetical population in which SARS-CoV-2 infections do not occur or are independent of the risk of the potential adverse events conditional on the measured variables and may therefore be relevant to decision-making during any future times of less frequent SARS-CoV-2 circulation.

In a secondary analysis, we ignored incident SARS-CoV-2 infections during the follow-up and estimated a total effect of the vaccines on potential adverse events through all causal pathways between the vaccines and outcomes, including those potentially mediated by infection. That is, these risks capture complications arising both from the vaccine themselves and from the incident infections that they are intended to prevent. This estimand may be relevant to decision-making during the acute phase of a pandemic in which the virus is still densely circulating.

eFigure 1. Cumulative Incidence of Potential Adverse Events (January 4–October 5, 2021)

Shaded areas represent pointwise 95% confidence intervals.

eFigure 2. Secondary Analysis Without Censoring Incident SARS-CoV-2 Infections During the Follow-up: Cumulative Incidence of Potential Adverse Events (January 4–October 5, 2021)

These estimated risks capture complications arising both from the vaccines themselves and from the incident infections that they are intended to prevent. Shaded areas represent pointwise 95% confidence intervals.

eTable 1. Target Trial Specification and Emulation

eTable 1. Specification and Emulation of Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).		
Protocol component	Target trial specification	Target trial emulation
Eligibility criteria	<ul style="list-style-type: none"> • Aged ≥18 years between January 4, 2021, and September 20, 2021 • No previously documented Covid-19 vaccination • No interactions with the health care system in the past 3 days, which may indicate the start of symptomatic disease and preclude vaccination • No contraindication for Covid-19 vaccination: <ul style="list-style-type: none"> ○ Severe allergic reaction (e.g., anaphylaxis) or immediate reaction of any severity to the vaccine or any of its components ○ Immediate allergic reaction of any severity to polysorbate (due to potential cross-reactive hypersensitivity with the vaccine ingredient PEG) • No previously documented positive SARS-CoV-2 PCR test • No history of the potential adverse event of interest • Known residential address • Not in a long-term care facility • User of VA health care system (defined as receiving care at a station eligible to administer the vaccines under study and having at least one in-person or telehealth primary care visit in the past year) • Known smoking status and body mass index in the past year 	<p>Same as for the target trial, except:</p> <ul style="list-style-type: none"> • We identified previously documented SARS-CoV-2 infections using the VA Covid-19 National Surveillance Tool,¹ which integrates data on PCR laboratory tests with natural language processing of clinical notes to capture diagnoses inside and outside the VA system. • Data on the listed allergic reactions are not consistently available for all Veterans, but we assumed that receiving the vaccine indicates there was a determination of no previous allergic reaction.
Treatment strategies	<p>(1) Receive one dose of BNT162b2 vaccine at baseline and an additional dose scheduled 21 days later, or</p> <p>(2) Receive one dose of mRNA-1273 vaccine at baseline and an additional dose scheduled 28 days later.</p> <p>Under each treatment strategy, individuals must not be diagnosed with SARS-CoV-2 infection during the follow-up.</p>	<p>Same as for the target trial. We defined the date of vaccination using records in both the <i>Immunization</i> domain and procedures recorded in the <i>Outpatient</i> or <i>Inpatient</i> domains. There was strict adherence to vaccine deployment protocols in this population.*</p>

Treatment assignment	Individuals are randomly assigned to a strategy at baseline within strata defined by calendar date (5-day bins), age (5-year bins), sex (male, female), race (white, black, other, unknown), urbanicity of residence (urban, not urban), and geographic location coded as 19 categories of Veterans Integrated Services Network. Individuals will be aware of the assigned treatment strategy.	We assumed random assignment after matching individuals who were vaccinated with the BNT162b2 vaccine in a 1:1 ratio to eligible individuals vaccinated with the mRNA-1273 vaccine, using the same factors used for stratified randomization as in the target trial.
Outcomes	<ul style="list-style-type: none"> • <i>Neurologic event</i>: Bell's palsy, non-facial paralysis, paresthesia, seizure, syncope, vertigo • <i>Hematologic event</i>: anemia, lymphopenia, neutropenia, thrombocytopenia • Hemorrhagic stroke • Ischemic stroke • Myocardial infarction • <i>Other thromboembolic event</i>: cerebral venous sinus thrombosis, deep venous thrombosis or thrombophlebitis, pulmonary embolism, other thrombosis (arterial embolism and thrombosis, vascular insufficiency of the intestine) • Myocarditis or pericarditis • Arrhythmia • Kidney injury • Appendicitis • <i>Autoimmune event</i>: Guillain-Barré syndrome, inflammatory bowel disease, multiple sclerosis, psoriasis, rheumatoid arthritis, systemic lupus erythematosus, uveitis • <i>Herpes</i>: herpes simplex, herpes zoster • Arthritis or arthropathy • Pneumonia 	Same as for the target trial. We defined diagnoses using records in <i>Inpatient</i> , <i>Outpatient</i> , and <i>Fee</i> domains.
Follow-up	For each person, follow-up starts on the day of vaccination (baseline) and ends on the day of the outcome of interest, censoring (due to diagnosis with SARS-CoV-2 infection), 266 days (38 weeks) after baseline, or the end of the study period (October 5, 2021), whichever happens first.	Same as for the target trial.
Causal contrasts	Intention-to-treat effect. Per-protocol effect, i.e., the effect if all individuals had received the vaccination they were assigned to at baseline and the corresponding second dose at the scheduled time.	Observational analogue of the per-protocol effect.

Statistical analysis	Cumulative incidence (risk) curves and estimates of 38-week risk, risk differences, and risk ratios comparing the vaccination groups. Subgroup analyses by baseline age and race.	Same as for the target trial.
Abbreviations: Covid-19, coronavirus disease 2019; PCR, polymerase chain reaction; SARS-CoV-2, severe acute respiratory syndrome coronavirus 2.		
* Among persons who received a dose of the BNT162b2 vaccine and had at least 21 days of follow-up, 98% received a second dose of the vaccine (of whom 92% received it before day 24 and 96% received it before day 28). Among persons who received a dose of the mRNA-1273 vaccine and had at least 28 days of follow-up, 98% received a second dose of the vaccine (of whom 92% received it before day 31 and 97% received it before day 35). Therefore, we defined treatment strategies based on the first dose only.		

eTable 2. Study Variables

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).				
Variable	Functional form	Values	Detail	Codes
Time-fixed (baseline)*				
Age (years)	Linear	N/A	Based on records in the <i>Patient</i> domain.	N/A
Sex	Indicator	Male/Female	Based on records in the <i>Patient</i> domain.	N/A
Race	4 categories	White Black Other Unknown	In the case of multiple reported races, the most frequently reported race was selected. Based on records in the <i>Patient</i> domain.	N/A
Ethnicity	3 categories	Not Hispanic Hispanic Unknown	In the case of multiple reported ethnicities, the most frequently reported ethnicity was selected. Based on records in the <i>Patient</i> domain.	N/A
Veterans Integrated Services Network (VISN)	19 categories	19 VISNs representing different geographic regions of the country	Defined as the location of the most recent station utilized prior to baseline. In the case of multiple station visits on the most recent visit date prior to baseline, the station with the most visits on that day was selected. In the case of a tie, the most commonly visited station in the past year was selected among those tied. In the case of another tie, a random station was selected among those tied. Based on records in the <i>Outpatient</i> domain.	N/A

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).

Variable	Functional form	Values	Detail	Codes
Received care at a station that offered the BNT162b2 vaccine	Indicator	Yes/No	Defined using the history of stations utilized prior to baseline. Assessed daily. Based on records in the <i>Patient</i> domain.	N/A
Received care at a station that offered the mRNA-1273 vaccine	Indicator	Yes/No	Defined using the history of stations utilized prior to baseline. Assessed daily. Based on records in the <i>Patient</i> domain.	N/A
Primary care visit in the past year	Indicator	Yes/No	Defined as an in-person or telehealth primary care visit, based on stop codes in any position. Based on records in the <i>Outpatient</i> domain.	PCP: 301, 322, 323, 348, 350 Tele-PCP: 338
Interaction with health care system within the past 3 days	Indicator	Yes/No	Defined as a primary care, inpatient, or emergency room visit, based on stop codes in the primary position. Assessed daily. Based on records in the <i>Inpatient</i> and <i>Outpatient</i> domains.	PCP: 301, 322, 323, 348, 350 ER: 1, 101, 130, 131
In long-term care within the past 2 years	Indicator	Yes/No	Includes admissions and inpatient transfers to or from a community living center (nursing home or domiciliary) or non-VA community nursing home. Based on records in the <i>Inpatient</i> and <i>Fee</i> domains.	Inpatient sources: AdmitSourceName, PlaceOfAdmit, MedicalService, Specialty, BedSection <i>Fee</i> domain: FeePurposeOfVisit or AustinCode in 40-44 or 89
Known residential address in the past year	Indicator	Yes/No	Based on Homeless Services Registry algorithm codes,	Stop codes: 504, 507, 508, 511, 522, 528, 529, 530, 590, 591, 592

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).

Variable	Functional form	Values	Detail	Codes
			using stop codes, specialty codes, ICD10 diagnosis codes, and adjudicated health factor codes. Based on records in the <i>Inpatient, Outpatient, Fee, and Health Factors</i> domains.	Specialty codes: 25-29, 37-39, 85, 86, 88, 109-111 ICD10: V60.0, Z59.0
Urban residence	Indicator	Yes/No	Defined as having an address with a GIS zip code considered to be urban. Based on records in the <i>Patient</i> domain.	N/A
Number of influenza vaccinations in the past 5 years	4 categories	0 1-2 3-4 ≥5	Based on records in the <i>Immunization</i> domain.	CVX codes: 15-17, 69, 88, 111, 123, 125-128, 135, 140, 141, 144, 149-151, 153, 155, 158, 160, 161, 166, 168, 171, 185, 186, 194, 197, 200-202, 205
Number of primary care visits in the past 5 years	4 categories	1-9 10-19 20-29 ≥30	Defined using stop codes, with PCP or Tele-PCP in the primary position, or in the secondary position if the primary position had a Tele-PCP combo stop code. Based on records in the <i>Outpatient</i> domain.	PCP: 301, 322, 323, 348, 350 Tele-PCP: 338 Tele-PCP combo: 147, 182, 324, 326, 683
Body mass index (kg/m ²)	Linear	N/A	Calculated using the most recent height and weight measurements. Based on records in the <i>Vital Signs</i> domain.	N/A
Obesity (body mass index ≥30 kg/m ²)	Indicator	Yes/No	Based on the most recent body mass index in the past year. Based on records in the <i>Vital Signs</i> domain.	N/A

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).

Variable	Functional form	Values	Detail	Codes
Smoking status	3 categories	Never Current Former	Defined as the most common self-reported smoking status prior to baseline. Based on records in the <i>Health Factors</i> domain.	
Chronic lung disease	Indicator	Yes/No	A flag for at least one of the following conditions: asthma, bronchitis, chronic obstructive pulmonary disorder. Each component described below is based on records in the <i>Inpatient</i> , <i>Outpatient</i> , and <i>Fee</i> domains.	See below
Asthma	Indicator	Yes/No	Defined as ≥ 2 diagnoses in the past 2 years.	ICD10: J45.%
Bronchitis	Indicator	Yes/No	Defined as ≥ 2 diagnoses in the past 2 years.	ICD10: J20.%, J21.%, J40.%, J41.%, J42.%
Chronic obstructive pulmonary disorder	Indicator	Yes/No	Defined as ≥ 2 diagnoses in the past 2 years.	ICD10: J41.0%, J41.1%, J41.8%, J42.%, J43.0%, J43.1%, J43.2%, J43.8%, J43.9%, J44.0%, J44.1%, J44.9%
Cardiovascular disease	Indicator	Yes/No	A flag for at least one of the following conditions: acute myocardial infarction, cardiomyopathy, cerebrovascular accident, coronary heart disease, heart failure, peripheral vascular disease. Each component described below is based on records in the <i>Inpatient</i> , <i>Outpatient</i> , and <i>Fee</i> domains.	See below

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).

Variable	Functional form	Values	Detail	Codes
Acute myocardial infarction	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years.	ICD10: I21.% (not including I21.A%), I22.%
Cardiomyopathy	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years.	ICD10: I42.%, I43.%
Cerebrovascular accident	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years.	ICD10: I60.%-I69.%, G45.%, G46.%, H34.0
Coronary heart disease	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years.	ICD10: I20.%, I21.%, I24.%, I25.10, I25.110, I25.2, I25.3, I25.41, I25.42, I25.5, I25.700, I25.710, I25.720, I25.730, I25.750, I25.760, I25.790, I25.810, I25.811, I25.812, I25.82, I25.83, I25.84, I25.89, I25.9
Heart failure	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years.	ICD10: I11.0, I13.0, I13.2, I50.20, I50.21, I50.22, I50.23, I50.30, I50.31, I50.32, I50.33, I50.40, I50.41, I50.42, I50.43, I50.814, I50.9, I50.1, I50.810, I50.811, I50.812, I50.813, I50.82, I50.83, I50.84, I50.89
Peripheral vascular disease	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years.	ICD10: I70.%, I71.%, I73.9, Z95.8, Z95.9, I73.1, I73.8, I77.1, I79.0, I79.2, K55.1, K55.8, K55.9
Hypertension	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years. Based on records in the <i>Inpatient, Outpatient, and Fee</i> domains.	ICD10: I10.%-I13.%, I15.%, I16.%
Diabetes	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years. Based on records in the <i>Inpatient, Outpatient, and Fee</i> domains.	ICD10: E08.%, E10.%, E11.%, E13.%
Chronic kidney disease	Indicator	Yes/No	Defined as ≥2 diagnoses in the past 2 years. Based on records in the <i>Inpatient, Outpatient, and Fee</i> domains.	ICD10: I12.0, I13.1, N03.2%-N03.7%, N18.%, N19.%, N05.2%-N05.7%, N25.0, Z49.0% - Z49.2%, Z94.0, Z99.2

			<i>Inpatient, Outpatient, or Fee</i> domain.	
Myocarditis	Indicator	Yes/No	N/A	ICD9: 391.2, 398.0, 422.%, 429.0 ICD10: I01.2, I09.0, I40.%, I41, I51.4
Pericarditis	Indicator	Yes/No	N/A	ICD9: 420.%, 423.9 ICD10: I30.%, I32, M32.12
Arrhythmia	Indicator	Yes/No	Defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	ICD9: 426.%, 427.%, ICD10: I44.%, I45.%, I46.%, I47.%, I48.% (not including I48.11, I48.2%), I49.%
Kidney injury	Indicator	Yes/No	Defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	ICD9: 584.%, ICD10: N17.%
Appendicitis	Indicator	Yes/No	Defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	ICD9: 540.%, 541, 542 ICD10: K35.%, K36, K37
Autoimmune event	Indicator	Yes/No	A flag for at least one of the following conditions: Guillain-Barré syndrome, inflammatory bowel disease, multiple sclerosis, psoriasis, rheumatoid arthritis, systemic lupus erythematosus, uveitis. Each component described below is defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	See below
Guillain-Barré syndrome	Indicator	Yes/No	N/A	ICD9: 357.0 ICD10: G61.0
Inflammatory bowel disease	Indicator	Yes/No	N/A	ICD9: 555.%, 556.%, 695.2 ICD10: K50.%, K51.%, K59.31, L52
Multiple sclerosis	Indicator	Yes/No	N/A	ICD9: 340 ICD10: G35
Psoriasis	Indicator	Yes/No	N/A	ICD9: 696.0, 696.1, 696.8

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).

Variable	Functional form	Values	Detail	Codes
				ICD10: L40.%, L44.8, L45
Rheumatoid arthritis	Indicator	Yes/No	N/A	ICD9: 714.0, 714.1, 714.2, 714.81 ICD10: M05.%, M06.%
Systemic lupus erythematosus	Indicator	Yes/No	N/A	ICD9: 373.34, 695.4, 710.0 ICD10: H01.12%, L93.%, M32.%
Uveitis	Indicator	Yes/No	N/A	ICD9: 091.5%, 098.41, 115.92, 360.12, 362.18, 363.0%, 363.1% (not including 363.14), 363.2%, 364.0%, 364.1%, 364.2%, 364.3 ICD10: A18.53, A18.54, A51.43, A54.32, H20.%, H30.%, H32, H35.06%, H44.11%
Herpes	Indicator	Yes/No	A flag for at least one of the following conditions: herpes simplex, herpes zoster. Each component described below is defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	See below
Herpes simplex	Indicator	Yes/No	N/A	ICD9: 054.%, ICD10: A60.%, B00.%
Herpes zoster	Indicator	Yes/No	N/A	ICD9: 053.%, ICD10: B02.%
Arthritis or arthropathy	Indicator	Yes/No	Defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	ICD9: 713.%, 719.[0,1]%, ICD10: E08.610, E09.610, E10.610, E11.610, E13.610, M02.2%, M07.6%, M12.8%, M25.0%, M25.4%, M36.1, M36.2, M36.3, M36.4
Pneumonia	Indicator	Yes/No	Defined as ≥1 diagnosis in the <i>Inpatient, Outpatient, or Fee</i> domain.	ICD9: 480.%, 481, 482.%, 484.%, 485, 486 487.0, 488.01, 488.11, 488.81 ICD10: A37.01, A37.11, A37.81, A37.91, A48.1, B25.0, B44.0, B77.81, J09.X1, J10.00, J10.01, J10.08, J11.00, J11.08, J12.%, J13, J14, J15.%, J16.0, J16.8, J17, J18.% (not including J18.2)

eTable 2. Variables Used in the Analysis when Emulating Target Trials Evaluating the Comparative Safety of the BNT162b2 and mRNA-1273 Vaccines Using Observational Data from Veterans Health Administration Electronic Health Records (January 4–October 5, 2021).

Variable	Functional form	Values	Detail	Codes
Documented infection with severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)	Indicator	Yes/No	<p>Defined as a nasopharyngeal swab, nasal swab, or saliva sample (or respiratory sample, if hospitalized) positive for SARS-CoV-2.</p> <p>Identified using the VA Covid-19 National Surveillance Tool, which integrates data on laboratory tests conducted at VA clinics with natural language processing of clinical notes to capture diagnoses inside and outside the VA health care system. The algorithm to identify persons with SARS-CoV-2 infection is continually updated to ensure new annotations of Covid-19 are captured from clinical notes, with chart reviews performed periodically to validate the algorithm.¹ Based on records in the COVID-19 Shared Data Resource. The event date is the specimen collection date.</p>	N/A
Death	Indicator	Yes/No	Based on records in the <i>Patient</i> domain.	N/A

* Baseline variables were assessed on January 4, 2021, unless otherwise noted.

Abbreviation: CI, confidence interval.

* Persons newly vaccinated with the BNT162b2 vaccine were matched in a 1:1 ratio to persons newly vaccinated with the mRNA-1273 vaccine according to the following variables: calendar date, age, sex, race, urbanicity of residence, and geographic location coded as categories of Veterans Integrated Services Network. Follow-up of a matched pair ended when either member developed a documented SARS-CoV-2 infection. The sum of events across subgroups may not equal the sum of events in the overall population because the entire analysis (including matching) was repeated after stratification of the population according to baseline characteristics.

† Neurologic events included Bell's palsy, non-facial paralysis, paresthesia, seizure, syncope, and vertigo.

‡ Hematologic events included anemia, lymphopenia, neutropenia, and thrombocytopenia.

§ Other thromboembolic events included cerebral venous sinus thrombosis, deep venous thrombosis or thrombophlebitis, pulmonary embolism, and other thrombosis (arterial embolism and thrombosis, vascular insufficiency of the intestine).

¶ Autoimmune events included Guillain-Barré syndrome, inflammatory bowel disease, multiple sclerosis, psoriasis, rheumatoid arthritis, systemic lupus erythematosus, and uveitis.
