

**Ba-TEA-TTX**

This figure displays a series of electrophysiological traces showing current responses to a voltage step in the presence of Ba-TEA-TTX. The traces are arranged vertically, with the most prominent response at the top. The voltage step is indicated by a horizontal line that steps up and then returns to baseline. The current responses show a rapid rise to a steady-state level during the step, followed by a rapid decay upon step termination. The traces are inverted relative to the top figure, with the most prominent response at the top. The text "Ba-TEA-TTX" is centered above the traces.
